

1. The names of all members of your project group.

Dan Reife, Dan Blank, Adam Baitch, Tara Siegel

2. The list of user stories that you completed in this iteration (you can just copy them from Pivotal Tracker) and your project velocity.

3. For user stories that were planned but not finished, explain why.

Some user stories simply weren't feasible. For instance Google doesn't allow syncing of users' accounts from an emulator and until the third week, none of the team had an Android device. The proposed pillbox database for autocompleting medicines wasn't what we thought it would be, and so we spent time researching an alternative database that we could use.

With most however, the issue was that we weren't aware of the level of complexity currently in the code. We vastly overestimated how much we'd be able to understand and then build upon and spent most of the iteration understanding what was already there.

4. Describe any known bugs in the application, and how you plan on fixing them.

5. Describe the tests that you wrote (just mention which classes/methods you tested).

6. If there are any issues that need to be resolved before the second iteration (technical or personnel), describe them here.

Reduce the total number of points for the project due to the issues mentioned in part 3.
